

Technical Documentation VIBREX® Belt cleaning brush with hole circle tensioner

- 1. Safety instructions
- 2. Mounting instructions
- 3. Maintenance
- 4. Spare, wear and accessory parts
- 5. Dimension sheet, general and component drawings

1. Safety instructions

Working at running conveyor belt is dangerous.

Stop conveyor belt before start of mounting and, if necessary, the inlet in the transfer chute and secure against unauthorized restarting. Observe the regulations for prevention of accidents.

Only trained and practised personnel is allowed in coordination with the individual safety regulations and the mounting conditions to adjust the VIBREX conveyor belt cleaners at running conveyor belt. The control and maintenance personnel has to be instructed according to the safety regulations before the conveyor belt is taken into operation.

2. Mounting

- a) State required action position of the brush at the belt support construction.
- b) 268 mm again the conveying direction measure for the Universal Hanger Mount (Pos.1 of drawing No. .: 2.03.3.2543-) to be marked.
- c) Screw the angle of the Universal Hanger Mount on both sides of the belt support construction or casing. Alternatively use welding and fasten hole bars.
- d) Screw loosenly at the hole bar a Bearing Plate (Pos.4) with the axle bearing showing upwards.
- e) Pull the Fixation Ring (Pos.2) and an axle bearing socket (Pos.3, the bigger surface shows innerwards) on an axle end and introduce them in the Bearing Plate. Pull then the brush with the bearing arms (Pos.8).
- f) Pull the second axle bearing socket (bigger surface as above directioned) and the Bearing Plate on the other axle end and screw it loosen to the hole bar. Axle bearing sockets to be pressed into the hole of the Bearing Plate.
- g) Pull the tensioner on one axle end (preferentially opositely to the belt drive drum). Use two tensioners at belt width beginning with 1200 mm. Turn axle until the brush is positioned at the belt. Press the tensioner to the bearing plate and fasten the fixing ring. Do the same with the second fixing ring.
- h) Adjust all components and fasten the screws. Ensure the electric connection by an electrician (turning direction against the conveying direction) and switch on. The motor should first run one minute so that build up at the belt by residual materials uis prevented.
 - When running the test control the regular running of the brush and the optimal fastening of the screws.
- i) Mount the tensioning wrench on the outer hexagonal rim of the pin hole ratchet tensioner and tension the brush. After effecting the contact to the belt turn one hole unit. Insert safety pin (Pos.6) and secure it.
- j) Observe scraping/cleaning effect, eventually tension again.

3. Maintenance

According to general experiences with sophisticated machine elements the following maintenance cycles should be observed and, if necessary, adapted to the operational requirements:

- a) Weekly inspection
- b) Monthly actuation and tensioning respectively adjusting
- c) Quarter and half year checking of the final wearing date and, if necessary, preliminary exchange of the worn out brush segments.

4. Spare and Wear Parts

Pos.	Denomination	B. w. A	Material	Dim.	ArtNr.:
5	Hole circle tensioner cons. of : hole circle segment angle bolt tensioning wrench		aluminium steel,zinced steel,zinced		027110
7	Axle	400 500 650 800 1000 1200 1400 1600 1800	steel, painted	L = 850 L = 950 L = 1500 L = 1500 L = 2000 L = 2500 L = 2500 L = 2500	028451
9	brush segment		polyurethane	Ø 234 x 97	
10	Drum motor		steel		

5. Drawings

This documentation 2.02.3.2292-includes drawing nos.: 2.03.3.2543-

2.04.3.2091-2.01.4.2527-2.04.4.2544-2.04.4.2545-2.03.4.2516-
